

Combined Credit Card Analytics Report – FY 2023

Summary

Here's a summarized report combining insights from both the **Credit Card Customer Report** and **Credit Card Transaction Report** dashboards. This synthesis highlights key metrics, customer segmentation, transaction behaviours, and strategic opportunities.

Key Financial Metrics

- Strong revenue and transaction volume indicate healthy card usage.
- Moderate CSS (3.19) suggests room for service improvement.

Customer Segmentation Insights

By Age

- **40–50 age group** contributes the highest revenue (₹42M).
- Younger (20–30) and older (60+) segments show low engagement.

By Education

- Graduates are the most valuable segment.
- Data gaps in education suggest need for improved profiling.

By Job Type

- Business and white-collar professionals dominate revenue.
- Opportunity to tailor products for self-employed and government employees.

By Marital Status

- Married customers lead with ₹28M revenue.
- Single: ₹23M; Unknown: ₹4M — data quality improvement needed.

Card & Transaction Behaviour

Card Category Performance

- Blue card dominates across all metrics.

- Upsell potential for Silver and Gold users.

Transaction Mode

- Swipe is preferred; online usage is low—digital adoption campaigns recommended.

Expense Type Breakdown

- Bills and lifestyle categories dominate spend.
- Opportunity for merchant partnerships and targeted offers.

Regional Performance

- TX, NY, CA are top-performing states.
- FL and NJ offer growth potential.

Strategic Recommendations

1. **Prioritize 40–50 age group and married graduates** for premium offerings.
2. **Enhance CSS** through personalized service and faster resolution.
3. **Promote Blue card upgrades** and incentivize online transactions.
4. **Launch regional campaigns** in FL and NJ to boost underperforming markets.
5. **Partner with merchants** in Bills, Entertainment, Fuel, and Grocery categories.
6. **Improve data completeness** in marital status and education fields.
